

## The compact sewer construction laser for pipes from DN 100

Stability, reliability, and professionalism in a new guise: The partner for the construction of drainage systems and pipelines. Technology to the point.

### Details

|                                         |                                    |
|-----------------------------------------|------------------------------------|
| Laser diode/Laser class                 | green / 2                          |
| Self-leveling area                      | $\pm 5^\circ$                      |
| Beam diameter                           | 10 mm                              |
| work area                               | 120 m                              |
| Inclination range                       | -20 % - +30 %                      |
| Reading accuracy                        | 0,000 %                            |
| Horizontal accuracy                     | $\pm 5 \text{ mm} / 100 \text{ m}$ |
| Range of IR remote control (front/rear) | 150 m / 10 m                       |
| Dust and water protection               | IP 68                              |
| Operating time / Power supply           | 24 h / 8000 mAH Li-Ion             |
| Temperature range                       | -20 °C - +50 °C                    |
| Weight (device only)                    | 2,8 kg                             |
| Dimensions (Ø x L)                      | 96 mm x 332 mm                     |
